

SJC Wiring Information Sheet

Overview

The Stanley Jablonski Public Works Complex has been outfitted with new data cabling. The new data cables will enhance communication speed and allow for easy reconfiguration or expansion as needed.

Additional voice ports connecting to the Town's current telephone system were also added.

As part of new cabling project, new data ports were installed allowing all locations in the Complex to have access to the Town network.

Highlights

- New wiring increases speed and reliability of connections to Town Network
- Additional data ports allow for expansion and mobility
- New voice ports were added to current telephone system.

Interaction with Other Systems

- Improved access time to town servers and applications
- New voice wiring for access to the Motorola radio system was provided and implemented
